An overview of the technologies and tools used to build a scalable, secure, and high-performance solution.

Introduction

CyberNet is a platform designed for lawyers specializing in class action lawsuits. The platform streamlines the discovery, organization, and execution of data breach cases by automating traditionally manual processes. It consolidates everything—from tracking public breach notifications to creating marketing campaigns—into a single, unified application.

Lawyers can easily manage client leads, create landing pages, generate QR codes, and even capture leads directly through custom-built forms. With a powerful AI conversation bot, CyberNet simplifies legal document management, ensuring the smooth execution of class action lawsuits.

The Problem

Keeping up with new data breach notifications was a constant challenge; manual tracking across multiple sources proved both tedious and inefficient.

At the same time, managing leads, documents, and campaigns relied heavily on manual processes or outsourcing, driving up costs and wasting valuable time.

On top of that, advertising campaign management was fragmented across multiple tools and platforms, making workflows unnecessarily complex. It was clear that a smarter, more integrated approach was needed.

The Solution

- **Centralized Platform:** HackTech developed a unified platform to handle everything from data gathering to lead generation and campaign management.
- **Automation of Data Collection:** CyberNet integrates with multiple data breach notification databases, including the SEC's EDGAR and various state sources, to automate the discovery of data breach cases.
- **AI-Driven Campaign Management:** We built an AI-powered system that automatically generates landing pages, QR codes, and campaigns, streamlining the entire process.
- **Lead Management and CRM:** All leads are captured and managed within the same platform, where they can be contacted, stored, and processed, ensuring smooth client outreach experience.
- **AI Legal Assistant:** A built-in AI conversation bot helps lawyers quickly summarize and retrieve key points from large volumes of legal documents, enhancing efficiency and accuracy.

The Result

Our collaboration with CyberNet resulted in a powerful, AI-driven platform that streamlines class action case management, helping law firms efficiently discover and manage legal claims.

- **Automated Data Collection:** Integration with breach notification databases for real-time, automated tracking of new data breaches.
- **Unified Platform:** A single application to gather data, organize documents, create landing sites, and manage marketing campaigns, all in one place.
- **AI-Powered Campaign Creation:** Automated tools for generating landing pages, QR codes, and running advertising campaigns ensure minimal manual effort.
- **Lead Management System:** A comprehensive CRM system to capture, organize, and follow up with leads directly within the platform.
- **AI Legal Assistant:** An AI bot for lawyers to quickly extract relevant information and insights from large sets of legal documents.
